DISCUS 2020 Version 11.1.1 Release Notes

Previous Version:	11.0.0
Release Date:	July 7, 2020
Release Type:	Minor

FEATURES

- Added feature to allow for the specification of starting directory for each file chooser.

- Added the ability to define and upload data to Net-Inspect fields 14.a – 14.d via the use of DISCUS tokens.

- Added the ability to customize the data that DISCUS uploads to the Net-Inspect Comment field via the use of plain text and DISCUS tokens.

- Added the ability to append the number of places to the requirement description field when the number of places of greater than 1, in the format "yX", where y=places.

- Added a new Data Type "Basic" for which any result value will result in the characteristic passing result validation.

- Added the ability to set the default value for the Key field in the BOC.

- Added features to decrease the number of steps required to apply balloon property changes to existing characteristics.

- Added the ability to export to Excel the Operation Analysis data when the DISCUS Planner add-on module is enabled.

BUGS

- Fixed a bug which caused issues when the Operation Name in DISCUS Planner contained forward and backward slash characters.

- Fixed a bug regarding modeless behavior which caused inconsistencies between the drawing panel and the TDP Properties.

- Fixed a bug which prevented the display of PMI with specific model examples when the DISCUS 3D add-on module was enabled.

- Fixed a bug which prevented the overwriting of an existing template of the same name when importing a template in the Excel Export Settings area.

- Fixed a bug that caused unexpected behavior when importing via CSV to the Materials & Processes list.

- Fixed a bug which appended extraneous characters to the ballooned drawing file name when uploading to Net-Inspect.

- Fixed a bug relating to DISCUS proxy settings where DISCUS would not respect the OS system settings.

- Fixed a bug which caused only the first page to export when exporting the result of the Compare Drawings feature.

- Fixed a bug which allowed more than 1 space character between multiple results when the Results add-on module was enabled, causing unexpected behavior.

- Fixed a bug which caused the TDP Properties dialog to initially display with insufficient width.

- Fixed a bug in DISCUS Planner which resulted in the requirement image include/exclude setting changes to only be applied to the Final operation.

- Fixed a bug in which DISCUS was not respecting the specified measuring system when using the AutoBalloon feature.

- Fixed a bug which result in incorrect data to be displayed in the Belongs To field of the BOC when the 3D add-on module was enabled and certain conditions were met.

- Fixed a bug in DISCUS 3D which prevented the OK and Apply buttons of the Balloon Properties dialog to function properly under specific circumstances.

- Fixed a bug in DISCUS 3D which was causing unexpected behavior regarding Balloon Properties when the TDP also contained one or more PDF drawings.

- Fixed a bug which caused unexpected behavior with the Inspection Method and Sampling dropdown menus when the Planner add-on module was enabled.

OTHER

- Changed Help PDF to reflect new features.

- Improved logic and behavior relating to the FAI Inspector field in the BOC.

- Improved CMM add-on module logic to support changes to the FAI Inspector behavior.

- Added missing tokens for default Custom Report fields.
