

DISCUS 2020 Version 11.1.5 Release Notes

Previous Version: 11.1.4
Release Date: September 24th, 2021
Release Type: Patch

FEATURES

- Added a feature which validates the UOM for each characteristic when opening an existing TDP against the UOMs found in the characteristic library (ccc.xml file). If invalid UOMs are found in the TDP, the user is presented with a dialog in which they may the invalid UOM(s) to valid UOM(s) for each affected Characteristic Type. Canceling this dialog will abort the opening of the TDP.
- Added a feature which associates each Flag Note with a drawing. In the Flag Note dialog (Drawing > Flag Notes) the user will now see all Flag Notes for the entire TDP and which drawing they are associated with. When creating a Flag Note characteristic type, the user by default will only see Flag Notes associated with the focused drawing but has the option to see and utilize Flag Notes from other drawings via the selection dialog.

BUGS

- Fixed a bug which prevented line-break characters from being used and displayed properly within the text of a Flag Note.
- Fixed a bug in which Flag Notes without requirement images would fail to display in the Flag Note section dialog.

OTHER

- Flag Note numbers are no longer constrained to positive integers. Flag Note numbers may now include any number, alpha character, the decimal character, or any combination thereof.
