

# CUSTOMER SUCCESS STORY

## DEKING SCREW PRODUCTS - *Chatsworth, CA*

DeKING Screw Products (DeKINGscrew.com) is a machining company that focuses on providing high-precision parts for the aerospace, automotive, and medical industries. DeKING is quality-certified for both AS 9100 and ISO 9001 compliance.

In 2017, DeKING determined that a solution was needed for creating inspection reports more efficiently and in less time. After a 30-day trial evaluation, DeKING determined that the DISCUS software was the tool that met their needs and elected to implement the software throughout their Quality Department.

Janette Zamora, in DeKING's Quality Department, explained her initial reaction to using DISCUS. She exclaimed, "DISCUS made everything easier but especially when ballooning drawings. In addition, the implementation of the software was straightforward and simple. The DISCUS support team was always willing to assist with learning the product, eager and willing to contact us and walk through any questions we had."

The DeKING Quality Department recently upgraded to DISCUS 2022 that includes the newest functionality

called **Intelligent Drawing Analysis (IDA™)**. The IDA™ technology automatically identifies characteristics and balloons the entire 2D drawing in just a few clicks. This is extremely helpful and now provides an even quicker and more accurate process.

According to Dave DeVandry, CEO of DeKING, "DISCUS IDA™ has saved us an astronomical amount of time in just formatting reports. By using the new IDA™ capabilities, inspectors can export any type of report we would like or need. DISCUS software is great by itself for ballooning the drawing, but a bonus is that it also produces inspection plans. The versatility the software provides is greatly beneficial."

Dave DeVandry added, "By completing Inspection Reports for 20 parts per month with DISCUS, we save a minimum of 40 hours per month. The **return-on-investment for DeKING was made within the first month of using DISCUS!**"

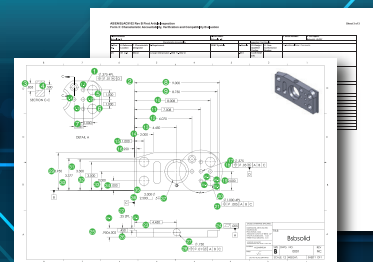

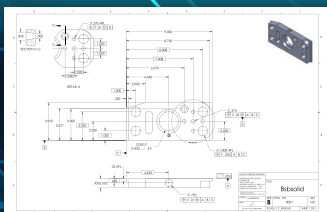

The DISCUS software helps DeKING Screw Product realize their mission statement of "precision machined, quality parts on time".
